Received evidence 4/1/63 from S/1 John F. Gallagher -
46, 47, 48, 49, 50, 51, 52, & 53.

The jacketed, open-nosed bullets had all been pulled from their casings (44, 45, 46, 47).
All casings marked "R-P 30-06 SPRG".

A portion of lead from the mutilated surface of 46 was cut from which three samples were cleaned and prepared.

Bullets 44, 45, 46, 47, & 48 were cut approx. in half (+ to their length), and three samples were cut from the two halves.

One sample was taken from the center of the bullet at the end, and two others were taken from near the edges of the bullet diametrically opposite each other.

These samples were then cleaned & prepared.

All samples & slides cut into cubes.

Evid returned to Gallagher 4/22/63.
